1. GETTING STARTED

What Bumblebee is

One system for everything CUBS makes and sells — from the fabric roll to the packed order and the paid invoice.

One place for the whole business

Bumblebee is the operating system for **CUBS** (cubsgoplaces.com), a kidswear brand that designs, cuts, sews and packs everything in-house and imports part of its fabric and trims.

It replaces spreadsheets, WhatsApp threads and paper books with one shared record: what customers ordered, what the factory is making, what is in the warehouse, what was bought from suppliers, and what has been invoiced and paid.

- Runs in the browser — nothing to install. Works on laptops, tablets and phones.
- English and Arabic, with the whole screen switching to right-to-left.
- Every login is created by your admin, and each person only sees the modules their role allows.
- Every document — quotation, order, invoice, receipt, goods received note — gets a permanent number and can be printed.

The public page at bumblebee-cubs.vercel.app

The home dashboard

After you sign in you land on the **Dashboard**. It summarises the business at a glance: pipeline value, revenue, work completed, overdue invoices, stock alerts, and orders by production stage.

Numbers on the dashboard are calculated from the records in the system, so they are only as current as the data your team enters.

Home → Dashboard

What is live and what is a preview

Most modules save real data to your workspace. A few newer modules are **previews**: they show sample data so you can see where the product is going, but changes there are not saved.

Area	Status
Quotations, Sales Orders, Point of Sale	Live
Products, Production, Planning & Cutting, Quality Control, Designs, Site Visits, Delivery	Live
Inventory, Fabrics, Materials, Assets, Purchasing	Live
Invoices & Receipts	Live
Users & Access (logins, module access, suspend, remove), Team, Employees	Live
Settings, Branches, Reports, Analytics, Data import/export, Activity, Work items	Live

Area	Status
CRM, Finance dashboard/expenses/bank/AR-AP, HR dashboards/payroll/recruitment, Loyalty, Shopify kit, Mobile apps, Studio, Intelligence/Forecast/Risk	Preview (sample data)

 **Good to know:** See [Preview modules](#) for exactly what each preview shows.

How work moves through Bumblebee

The main chain for a customer order:

- 1 Quotation (QT-)** — prices for the customer. Send, then approve.
- 2 Sales order (SO-)** — created from the approved quotation, or directly.
- 3 Production order (MO-)** — pattern → cutting → sewing → finishing → quality check → packing.
- 4 Quality inspection (QC-)** — pass, fail or conditional, with a defect log.
- 5 Delivery note (DN-)** — scheduled, loaded, in transit, delivered.
- 6 Invoice (INV-)** — full amount or a deposit, from the sales order.
- 7 Receipt (RCT-)** — each payment against the invoice.

And for buying materials: **Purchase request (PR-)** → **Purchase order (PO-)** → **Goods received note (GRN-)**.

Production → Overview shows every order by stage

1. GETTING STARTED

Signing in and out

Your admin gives you a username and password. There is no self sign-up and no Google login.

Sign in

- 1 Open **bumblebee-cubs.vercel.app** and choose **Sign in**.
- 2 Type the **username** your admin gave you (for example `sara.ahmed`). Usernames are not case-sensitive.
- 3 Type your **password**. Use the eye icon to check what you typed.
- 4 Choose **Sign in**. You land on the Dashboard.

Good to know: Accounts are created only by an owner or admin inside **Users & Access**. If you don't have a login, ask them — there is no "create account" button on purpose.

The sign-in page

Staying signed in

Bumblebee keeps you signed in on that browser until you sign out, clear the browser's site data, or your admin suspends your account.

On a shared computer, always sign out when you finish: open the menu under your name in the top-right corner and choose **Sign out**.

Forgot your password?

There is no email reset link. Ask an owner or admin to open **Users & Access**, select your name and choose **Reset password**. They set a new password and pass it to you.

Once you are signed in, change it to something only you know: **Settings** → **Security** → **Change password**.

 **Important:** Only the workspace **owner** can reset the password of another owner or an admin.

Messages you might see

Message	What it means
That username and password don't match.	Either the username or the password is wrong. Check Caps Lock and spelling.
Too many attempts. Wait a minute, then try again.	Several wrong attempts in a row. Wait one minute.
Can't reach the server.	Your internet connection dropped, or a firewall blocks the site.

If an admin suspends or removes your login, you're signed out within seconds and the sign-in page tells you why. A suspended login can't sign in until the admin chooses **Re-activate**.

1. GETTING STARTED

Finding your way around

The sidebar, the top bar, search, pinned pages, notifications and Buzz.

The sidebar

The narrow rail on the far left holds the main areas: **Home, Sales, Production, Inventory, Delivery, Finance, People, Loyalty, Channels, Insights**. Choosing one opens its pages in the second column.

- **Home** — Dashboard, Today, Work Queue, Activity.
- **Sales** — Sales pipeline, Quotations, Sales Orders, Point of Sale, CRM, Organizations, Contacts.
- **Production** — Production, Overview, Planning & Cutting, Work Items, Operations, Quality Control, Designs, Products, Site Visits.
- **Inventory** — Overview, Fabrics, Materials, Assets, Purchasing.
- **Finance** — Overview, Dashboard, Invoices, Expenses, Receivable/Payable, Bank, Reports.
- **People** — HR, Employees, Team, Users & Access.

You only see the areas your role allows. The « button collapses the second column to give the page more room.

The top bar

Control	What it does
< >	Back and forward through the pages you visited.
Breadcrumb	Shows where you are; click a part to go up a level.
☆ Pin page	Keeps the page in your pinned list for one-click access.

Left rail for areas, second column for pages in that area

Control	What it does
Search (Ctrl+K / ⌘K)	Finds pages and records by name.
🕒 Recent pages	The last pages you opened.
🔔 Notifications	Alerts such as low stock or overdue items.
⚙ Theme	Switches between light and dark.
AR / EN	Switches the language.
Your name	Your role, and Sign out.

Search anything with Ctrl+K

Press **Ctrl+K** (Windows) or **⌘K** (Mac), or click the search box. Start typing a page name, customer, product or document. Use the arrow keys and **Enter** to open a result, **Esc** to close.

Ctrl+K opens search from any page

Buzz, the assistant

The yellow bee button in the bottom corner opens **Buzz**, an assistant that answers questions about your workspace in plain language.

Good to know: Buzz needs its AI service switched on for your workspace. If it replies with an "API error", the service is not configured yet — everything else in Bumblebee works without it.

The round bee button opens Buzz

Today

Today is a short morning view: revenue collected, outstanding and overdue amounts, active work, and quick links to create a customer, invoice, expense or work item.

Home → Today

1. GETTING STARTED

Arabic and English

Switch language any time; Bumblebee remembers your choice on that browser.

Switching language

- 1 Click **AR** in the top bar to switch to Arabic, or **EN** to switch back.
- 2 The whole interface flips to right-to-left, including the sidebar and tables.
- 3 Your choice is saved on this browser and stays after refreshing or signing in again.

The language is saved per browser, not per account. On a new computer or phone, choose it once.

💡 **Tip:** If the language goes back to English every time you refresh, the browser is blocking site storage (private/incognito mode or a strict privacy setting). Use a normal window or allow storage for the site.

The dashboard in Arabic, laid out right-to-left

What gets translated

- All menus, buttons, labels and messages.
- Records you create keep the text you typed. Products, employees and some other records have separate English and Arabic name fields — fill both if you work in both languages.
- Printed documents are **always bilingual** (English and Arabic side by side), whatever language you are using.

Quotations

Price an order for a customer, send it, get it approved and turn it into a sales order.

The quotations list

Each card shows the quotation number, status, customer, project name, total and validity date. Use the search box and the status filter to narrow the list.

Status	Meaning
Draft	Being prepared. Not sent yet.
Sent	Sent to the customer, waiting for a decision.
Approved	The customer accepted. It can now become a sales order.
Rejected	The customer declined.
Expired	Past its validity date without a decision.
Converted	A sales order was created from it. Shows the SO number.
Cancelled	Withdrawn. The number stays on record.

Sales → Quotations

Create a quotation

- 1 Choose **New Quotation**.
- 2 Pick the customer (or type a name), contact person, project name, quotation date and **valid until** date.
- 3 Add one line per product: product name, description, quantity and unit price. Add a line discount as a % or a fixed amount if needed.
- 4 Optionally add an **order discount** (% or fixed) and the **VAT rate** (14% in Egypt).
- 5 Check the totals at the bottom — subtotal, discount, VAT and grand total.
- 6 Choose **Save**. The number (for example `QT-2026-00027`) is issued at that moment.

Good to know: A quotation needs at least one line. The number field shows "Issued automatically on save" — you can't type your own number.

New Quotation

How the total is calculated

- 1 Line total = quantity × unit price, minus the line discount (a fixed discount can't go below zero; a % discount is capped at 100%).
- 2 Subtotal = sum of all line totals.
- 3 Order discount is taken off the subtotal (fixed discounts are capped at the subtotal).
- 4 VAT = (subtotal – order discount) × VAT rate.
- 5 Grand total = subtotal – order discount + VAT.

The same calculation is used by sales orders, invoices and the printed documents, so the numbers always agree.

Send, approve, convert

- 1 On a draft, choose **Send** once it has gone to the customer.
- 2 When the customer answers, choose **Approve** or **Reject**.

- 3 On an approved quotation, choose **Convert to Sales Order**. A sales order is created with its own SO number, the same lines, discounts and VAT, and a reference back to the quotation.

Important: A quotation can be converted **once**. After conversion the button is replaced by "Sales order SO-...".

Print or cancel

Choose **Print** on any quotation to open the A4 version in a new tab, then **Print / Save PDF**.

Quotations are never deleted. The **X** button **cancels** a quotation so its number stays accounted for. Converted quotations can't be cancelled.

A printed quotation

Sales orders

Confirmed customer orders — the starting point for production, delivery and invoicing.

The sales orders list

Each order shows its number, status, customer, items, total and a billing line: how much has been **invoiced**, how much is **paid**, and the **balance**.

Status	Meaning
Draft	Not confirmed. Can't be invoiced yet.
Confirmed	The customer confirmed. Ready to plan production and to invoice.
In Production	Being made.
Ready	Made and packed, waiting for delivery.
Delivered	Handed to the customer.
Closed	Finished — delivered and settled.
Cancelled	Withdrawn. Only possible while no active invoice exists.

Sales → Sales Orders

Create a sales order

Most orders come from an approved quotation (**Convert to Sales Order**). To create one directly, choose **New Order** and follow the six steps:

- 1 **Customer** — company or individual, contact, phone, address.
- 2 **Products** — one line per product with quantity and unit price.
- 3 **Details** — project name, priority, due date, notes.
- 4 **Mfg Route** — the production route for the order.
- 5 **Cost & Time** — estimated days and cost.
- 6 **Confirm** — review and save. The SO number is issued on save.

Good to know: Payments are **not** entered on the sales order. You invoice the order and record payments on the invoice — see [Invoices](#).

Move the order along with the button on its row: **Confirm** → **Start Production** → **Ready** → **Delivered** → **Close**.

The image shows a screenshot of a web application interface for creating a new sales order. A modal window titled "New Sales Order - Connected Wizard" is open, featuring a close button (X) in the top right corner. The wizard has a progress bar at the top with steps: Customer (active), Products, Details, Mfg Route, Cost & Time, and Confirm. Below the progress bar, there are tabs for "Company" and "Individual". A search bar labeled "Search Customer" with a magnifying glass icon and placeholder text "Search by name, phone, SKU..." is present. Below the search bar, a note says "Or enter manually below". The form fields are organized into two columns: "Customer Name" and "Contact Person" on the top row; "Phone" and "Email" on the second row; and "Address" and "City" on the third row. The "Phone" field has a placeholder "01xxxxxxxxx". At the bottom right of the form, there are "Cancel" and "Next >" buttons. The background of the application is blurred, showing a list of items.

New Order wizard

Invoice an order

On a confirmed order that is not fully invoiced, choose **Create invoice**. You can invoice the **full remaining** amount or a **part / deposit**. Full details in [Invoices](#).

The screenshot shows a 'Create invoice' modal window overlaid on a blurred background of an order management interface. The modal has a title bar with a close button (X). It contains a summary table, two radio buttons for invoice type, a text input for the amount, and fields for the due date and a note. At the bottom is a yellow 'Issue invoice' button.

Create invoice	
Sales order	50-2826-00014
Order total	82,800 EGP
Already invoiced	0 EGP
Left to invoice	82,800 EGP

☐ Full remaining ☐ Part / deposit

Amount incl. VAT (EGP)
82800

Due date Note

Issue invoice

Create invoice — full remaining amount or a deposit

Print, export, cancel

- **Print** opens the A4 sales order with the source quotation and every invoice listed, plus invoiced / paid / balance.
- **Export** downloads the list as CSV, including invoiced and paid amounts.
- **Cancel** is refused while the order has active (not void) invoices. Void those first.

2. SALES

Point of Sale (shop till)

Sell over the counter, take cash, card, mobile wallet or split payments, and print the receipt.

Before the first sale

The till needs at least one **branch** with one **register**. Create them in **Branches** (see [Branches & registers](#)). Choose the branch and register at the top of the till.

Products appear as tiles. Search by name, SKU or barcode, filter by category, or sort by price or stock.

Sales → Point of Sale

Make a sale

- 1 Click products to add them to the cart; use + / - to change quantity.
- 2 Optionally add the customer name and phone, a discount %, and a note.
- 3 Choose **Pay**, then the method: **Cash**, **Card**, **Mobile** wallet or **Split** (part cash, part card).
- 4 For cash, enter the amount received — the till shows the change.
- 5 Choose **Confirm Payment**. The sale gets its number (POS-2026-...) and the cart clears.

6 Choose **Print** to print the sale receipt, or **New Sale** to continue.

Line	How it's worked out
Subtotal	Sum of item prices × quantities.
Discount	Subtotal × discount %.
VAT (14%)	(Subtotal – discount) × 14%.
Total	Subtotal – discount + VAT.
Loyalty points earned	One point per whole EGP of subtotal.

Hold a sale

Serving someone else mid-sale? Choose **Hold**. The cart is parked and the till is free. Open **held** sales to bring it back, or discard it.

Important: Held sales are kept only while the till page is open. Refreshing or closing the tab loses them — complete them first.

If payment doesn't go through

- **Check the payment** — the details don't add up, usually cash received is less than the total. Fix the amount and confirm again.
- **Payment failed** — **The sale was not recorded.** Nothing was saved and the cart is kept. Check your connection and try again.
- **No registers** — the chosen branch has no active register. Add one in Branches.

3. PRODUCTS & PRODUCTION

Products, materials list and costing

Build each product once — sizes, materials, stages and cost — then reuse it for orders and production.

The product catalogue

Products shows every item CUBS makes, with SKU, category, cost, margin and warnings such as **Missing BOM** (no materials list) or **Missing Stages**.

Use **Export** for a CSV of the catalogue and **Import** to add many products from a spreadsheet.

Production → Products

Create a product

Choose **New Product**. Start blank or **From Template** (for example the garment template).
The wizard has six steps:

- 1 **Basic Info** — English and Arabic name, SKU, category, description, active or inactive.
- 2 **Dimensions** — sizes, measurements and estimated weight (optional).
- 3 **Materials & BOM** — each fabric and trim with quantity, unit, unit cost and waste %.
- 4 **Mfg Stages** — pattern, cutting, sewing, finishing, quality check, packing, with duration in hours, team and capacity per day.
- 5 **Dependencies** — which stages must finish before others (sequential) and which can run alongside (parallel).
- 6 **Cost & Review** — material, labour, machine and overhead cost, margin and the suggested selling price. Choose **Create Product**.

New Product — manufacturing wizard

How cost and price are worked out

Part	Calculation
Material cost	Sum of BOM lines (quantity × unit cost), plus each line's waste %.
Labour & machine	From the stages: hours × the cost rates you enter.
Overhead	The overhead amount or % you enter.
Total cost	Material + labour + machine + overhead.
Suggested price	Total cost plus your profit margin.

Critical path and **Total Work Days** show how long one batch takes when parallel stages run together.

Product page, duplicates and variants

- Open a product to see Overview, BOM, Stages and Cost. Choose **Edit** to change it and **Save Changes**.
- **Duplicate** copies a product — choose what to copy (dimensions, BOM, stages, pricing). Tick **Create as Variant** to link the copy to the original (for example another colourway).
- **Delete Product** removes it permanently; this can't be undone.

A product's overview, BOM, stages and cost

Production orders, stages and cutting lists

Plan a batch, move it through each stage, keep its cutting list, and print the job sheet.

Planning & Cutting

Every production order (MO) with its status, priority, customer, station, due date and progress bar. Overdue orders are flagged in red.

Production → Planning & Cutting

Create a production order

- 1 Choose **New Order**.
- 2 Enter a **Title** (for example "Explorer Zip Hoodie — Sage x 600") and the **Quantity (pieces)**. Both are required.
- 3 Optionally pick an approved **Design Brief** — it fills the title, customer and sales order for you.
- 4 Link the **Sales Order**, set **Priority**, **Station / Workshop**, **Start Date**, **Due Date** and notes.
- 5 Choose **Create Order**. The number (**MO-2026-...**) is issued and six stages are created: Pattern & Marker, Cutting, Sewing, Finishing & Pressing, Quality Check, Packing.

Good to know: Orders created before numbering was switched on may show older numbers such as PO-2026-041. They keep them.

Move through the stages

- 1 Open the order. The **Production Line** tab lists the stages in order.
- 2 Choose **Start** on a stage when work begins; its start time is recorded.
- 3 Choose **Done** when it finishes; the duration is calculated and the progress bar moves.
- 4 When the last stage (Packing) is done, the order becomes **Ready** for delivery.

The **Timeline** tab shows when each stage started and finished.

New Production Order

Production Line tab — each stage with time, worker and station

Cutting list

The **Cutting List** tab records each pattern piece: part name (for example "Front body (L/R)"), fabric, marker width and length (cm), plies, quantity, grain direction, size ratio (for example 2Y:1 4Y:2 6Y:2) and notes. Tick a piece when it is cut.

Use **Add Piece** to add, the pencil to edit, and the bin to remove a piece.

Print the job sheet

Choose **Print** in the order header. The A4 job sheet includes the linked sales order, quantity, the full cutting list and the stage log with sign-off columns — ready to hang at the cutting table.

Edit changes title, dates, station, priority and quantity. The MO number never changes.

A printed production order with cutting list and stage log

Production floor overview

Kanban and list views of everything being made, with alerts and production reports.

Production

The Production page brings all orders together. Switch between **Dashboard**, **Kanban** (a column per stage: Planned, Pattern, Cutting, Sewing, Finishing, QC, Packaging, Ready) and **List**.

- **Alerts** — delayed orders, material shortages, failed QC.
- **Materials** — fabric and trims needed by open orders.
- **Reports** — daily and weekly production, delayed orders, QC defects, material usage, efficiency and cost variance.

To move a stage forward or edit a cutting list, open the order in **Planning & Cutting**. New orders can be started from **New Order** here too.

Production → Production

Overview (executive view)

A live picture for managers: how many orders sit in each stage, what is late, and what is ready to ship.

Production → Overview

Quality control

Inspect production orders against a checklist, log defects, send work back for rework and re-inspect.

Run an inspection

- 1 Choose **New Inspection**. Pick the **Production Order** (the customer fills in), the **Inspector** and the **Type**: Pre-Assembly, In-Process, Final, Pre-Delivery or Re-Inspection.
- 2 Choose **Create**. The number (`QC-2026-...`) is issued and the status is **Pending**.
- 3 Choose **Start** when you begin. Go through the **Checklist** and mark each point pass or fail.
- 4 Finish with **Pass**, **Fail** or **Conditional** (accepted with minor issues).

Production → Quality Control

Log defects

In the **Defect Log**, choose **Log Defect**: title, severity (**Critical**, **Major**, **Minor**, **Cosmetic**), category, description, location on the garment and a photo.

Defect status	Meaning
Open	Found, not handled yet.
Rework	Sent back to the line to fix.
Re-Inspected	Checked again after rework.

Defect status	Meaning
Accepted	Accepted as is (for example moved to seconds).
Rejected	Scrapped.

Designs and site visits

Design briefs with versions and client approval; site visits for store and buyer measurements.

Design briefs

- 1 Choose **New Design**. Give it a **Title**, customer, sales order, designer, style, colours, materials and due date. The brief number (**DB-2026-...**) is issued on save.
- 2 Upload tech packs, flats and drawings under **Drawings**. Each upload is a new **Version**; **Version History** keeps the old ones.
- 3 Use **Comments & Annotations** for questions and revision requests; **Resolve** them when done.
- 4 Move the brief through Draft → In Progress → Internal Review → **Send to Client** → Client Review → **Approved** (or Revision).

An approved brief can be picked when creating a production order, which fills in the details.

Production → Designs

Site visits

Use site visits when someone goes out to measure — a store's hanging wall, a boutique window, a franchise stand. Each visit (`sv-2026-...`) holds the address, technician, date, a checklist, photos and **measurements by area** (width, height, depth, length).

Measurements go through Draft → Submitted → Approved (or Needs Revision). **Export Measurements** downloads them; **Download Template** gives an empty sheet to fill on site.

Production → Site Visits

Delivery and set-up

Schedule deliveries from production orders, track them to the door, and print the delivery note.

Deliveries

- 1 Choose **New Delivery** and pick the **Production Order**. The customer, sales order and production order numbers are linked automatically.
- 2 Add phone, delivery address, date, time slot, driver, vehicle, number of pieces and packages. The delivery note number (**DN-2026-...**) is issued on save.
- 3 On the day: **Start Loading** → **Dispatch** (in transit) → **Complete** (delivered) or **Failed**.
- 4 Choose **Print delivery note** for the driver. The customer signs the "Received by" box.

Delivery → Deliveries and Installations

Installations (store set-up)

For deliveries that need the team on site — dressing a window, fitting a shop-in-shop — create an **Installation** from the delivery (**INS-2026-...**). Track Scheduled → In Progress → Completed or On Hold, tick the checklist, log snags, add photos and the customer rating.

Inventory: fabrics, materials and assets

What you hold, where it is, what it's worth, and what needs re-ordering.

Inventory overview

Inventory & Assets shows stock value, low and out-of-stock items, a **Reorder Planner** with a suggested purchase budget, ABC analysis (items ranked by value share), recent movements and maintenance.

- **Add Inventory Item** — name, SKU, barcode, category, unit (metre, roll, piece, kg...), unit cost, quantity, reorder level, max level, location, vendor, photo.
- **New Movement** — **Stock In**, **Stock Out** or **Adjustment**, with quantity, reason and location. The on-hand quantity and status update automatically.
- **Quick adjust** — correct a count from the item row.

Inventory → Overview

Fabrics

A dedicated list for fabric rolls: composition, GSM, width (cm), colour, supplier, location, quantity, reorder level and unit cost. Status is **In Stock**, **Low Stock** (at or below the reorder level) or **Out of Stock**.

Inventory → Fabrics

Materials and trims

Trims and supplies grouped by category: Zippers, Buttons & Snaps, Elastic, Thread & Yarn, Labels & Tags, Lining, Packaging, Notions & Trims, Chemicals & Dyes, Other.

Inventory → Materials

Assets and equipment

Sewing machines, overlockers, embroidery heads, vehicles, tools and software licences. Each asset has a tag, serial number, condition, assignment, warranty expiry and **straight-line depreciation** (purchase cost ÷ useful life in years), showing book value and life used.

Schedule Maintenance records preventive, corrective, inspection or emergency work with date, vendor and cost.

Inventory → Assets

Purchase requests and purchase orders

Ask for materials, get approval, order from the supplier with item lines and VAT, and print the PO.

Purchasing & Vendors

Four tabs: **Overview** (pending approvals and recent orders), **Vendors**, **Requests** and **Orders**. The cards at the top count vendors, open requests, pending approvals, approved requests, open POs and PO value.

Add suppliers with **Add Vendor** — name, category, contact, phone, email, payment terms, country and notes.

Inventory → Purchasing

Purchase requests

- 1 Choose **New PR**. Add a description, supplier (optional), needed-by date, department, priority and item lines (item, quantity, unit, unit price).
- 2 Choose **Save & issue number** — you get **PR-2026-...** as a **Draft**.
- 3 Choose **Submit** to send it for approval.
- 4 A manager chooses ✓ **Approve** or ✗ **Reject**.
- 5 On an approved request choose **Create PO**. The PO opens pre-filled with the request's lines; when saved, the request becomes **Ordered** and shows "→ PO-...".

Requests tab

Purchase orders

- 1 Choose **New PO** (or **Create PO** from a request).
- 2 Description and **Supplier** are required. Add delivery date, payment terms and VAT % (14% by default).
- 3 Add item lines. Lines with no name or zero quantity are ignored; at least one real line is needed.
- 4 Check subtotal, VAT and total, then **Save & issue number** — PO-2026-... as a **Draft**.
- 5 Choose **Send to supplier** when it goes out. Status: **Sent**.

PO status	Meaning
Draft	Saved, not sent.
Sent	With the supplier, waiting for goods.
Partially Received	Some lines or quantities arrived.
Received	Everything ordered arrived.
Cancelled	Withdrawn. Not possible once goods were received.

The screenshot shows a 'New purchase order' modal window. At the top, it says 'The number is issued automatically when you save'. The form includes the following fields and values:

- Description: Imported fleece for joggers
- Supplier: Anatolia Textiles (TR)
- Delivery date: dd/mm/yyyy
- Payment terms: 30% advance, 70% on arrival
- VAT %: 14

Below these fields is a table for item lines:

Item	Qty	Unit	Unit price	Total
Brushed Fleece 280gsm — Navy	650	pcs	104	67,600

At the bottom right of the table, there is a summary:

Subtotal	67,600
VAT	9,464
Total	77,064 EGP

Below the table is a 'Notes' section with a text area. At the bottom of the modal, there are 'Cancel' and 'Save & issue number' buttons.

New purchase order with item lines and VAT

Print the purchase order

The printer icon on a PO opens the A4 purchase order: supplier, delivery date, payment terms, the source request number, item lines with ordered and received quantities, totals and signature boxes.

Supplier acceptance

موافقة المورد

A printed purchase order

Receiving goods (GRN)

Record what actually arrived — in one delivery or several — and print a goods received note for each.

Receive against a PO

- 1 In **Orders**, find a PO that is **Sent** or **Partially Received** and choose **Receive**.
- 2 Each line shows **Ordered**, **Received** so far, and a **Now** box pre-filled with what is still outstanding.
- 3 Change **Now** to what really arrived (0 for lines that didn't come).
- 4 Add the supplier's delivery note number and any notes.
- 5 Choose **Confirm receipt**. A goods received note `GRN-2026-...` is issued.

If every line is now fully received the PO becomes **Received**; otherwise **Partially Received** and you can receive again later. Each delivery gets its own GRN.

⚠ Important: You can't receive more than was ordered on any line — the box turns red and **Confirm receipt** is disabled. If the supplier sent extra, raise a new PO for the extra.

Receive goods — ordered, already received and now

Print the GRN

After confirming, choose **Print GRN**. Every GRN number also appears on the PO row — click it to print that note again. The GRN shows the supplier, who received it, the PO reference, quantities received against quantities ordered, and signature boxes for the warehouse and the supplier's driver.

Good to know: Older purchase orders created before item lines existed have no lines, so **Receive** doesn't appear on them.

A printed goods received note

Invoices

Invoice a confirmed sales order in full or in parts. Bumblebee never lets an order be over-invoiced.

Create an invoice from a sales order

- 1 Open **Sales** → **Sales Orders** and choose **Create invoice** on the order.
- 2 The panel shows the order total, what is already invoiced and what is **left to invoice**.
- 3 Choose **Full remaining** or **Part / deposit** and type the amount (VAT included).
- 4 Optionally set a due date and a note (for example "50% deposit").
- 5 Choose **Issue invoice**. You get `INV-2026-...` and can print it straight away.

Rule	Why
Only confirmed orders (not Draft or Cancelled)	You can't bill something the customer hasn't confirmed.
Amount must be more than zero	An empty invoice has no meaning.
Amount can't exceed what is left to invoice	The sum of all invoices never passes the order total.

How VAT is shown on an invoice

The amount you invoice includes VAT. Bumblebee splits it using the order's VAT rate: **amount before VAT** = $\text{amount} \div (1 + \text{rate})$, and **VAT** = **amount** – **amount before VAT**.

Example: a 1,000 EGP deposit at 14% → 877.19 before VAT + 122.81 VAT.

A deposit invoice prints as a single instalment line referencing the sales order and its full total. A full invoice prints the order's item lines.

Create invoice

Invoices & Receipts page

The cards show **Outstanding**, **Overdue**, **Invoiced this month** and **Collected this month**. Search by number or customer, and filter **All / Due / Overdue / Paid / Void**. Expand an invoice to see its receipts.

Invoice status	Meaning
Sent	Issued, nothing paid yet.
Partially paid	Some payments recorded; a balance remains.
Paid	Fully paid. Prints with a PAID stamp.
Overdue	Past its due date with a balance.
Void	Cancelled with a reason. Prints with a VOID stamp.

Finance → Invoices

The printed invoice

Shows your company details (from **Settings** → **Company**), bill-to, sales order and quotation references, every receipt number, lines, amount before VAT, VAT, invoice total, paid and **balance due**.

A printed tax invoice

Payments and receipts

Record each payment against its invoice and hand the customer a numbered receipt.

Record a payment

- 1 In **Finance** → **Invoices**, choose **Record payment** on the invoice.
- 2 The amount is pre-filled with the balance due. Change it for a partial payment.
- 3 Pick the date and the method: **Cash**, **InstaPay**, **Bank transfer**, **Card**, **Mobile wallet** or **Cheque**.
- 4 Add a reference (transfer or cheque number) if there is one.
- 5 Choose **Record & issue receipt**. You get **RCT-2026-...** and can print it.

Rule	Message if broken
Payment must be more than zero	Payment must be more than zero
Can't pay more than the balance	Only X is due on invoice INV-...
Invoice must be issued and not void	Invoice INV-... is void, payments can't be recorded

The invoice status updates by itself: **Partially paid** while a balance remains, **Paid** when it reaches zero.

Record payment

The receipts list

The **Receipts** tab lists every payment: receipt number, invoice, customer, method, reference, date and amount. Each printed receipt shows the invoice balance **before** and **after** that payment.

Receipts tab

Fixing mistakes: void and cancel

Issued documents are never deleted. Here is the right way to correct each kind of mistake.

Why nothing can be deleted

Once a document has a number, it may already be on paper in a customer's or supplier's hands. Deleting it would leave a hole nobody can explain. So Bumblebee **voids** money documents and **cancels** everything else — the record stays, marked, with the reason.

What to do for each mistake

Mistake	Fix
Wrong payment amount or method	Void the receipt (reason required), then record the payment again.
Payment recorded on the wrong invoice	Void that receipt, then record it on the right invoice.
Wrong invoice amount	Void every receipt on it, void the invoice, then create a new invoice from the sales order.
Sales order is wrong	Void its invoices first, then cancel the order and create a new one.
Quotation is wrong	Cancel it and create a new quotation with the right details.
Purchase order is wrong and nothing arrived yet	Cancel it and create a new PO.
Purchase order is wrong but goods arrived	It can't be cancelled. Create a new PO for the difference and note it.
Production order details are wrong	Use Edit — title, dates, quantity and station can change. The MO number can't.

Void an invoice or a receipt

- 1 In **Finance** → **Invoices**, choose **Void invoice** on the invoice, or the void button on a receipt (in the expanded invoice or the Receipts tab).
- 2 Type the reason — it's required and appears on the printed document.

3 Confirm. A voided receipt no longer counts towards the invoice; the invoice balance and status update.

 **Important:** Only **owners, admins, managers and finance** can void. An invoice with active receipts can't be voided — void the receipts first.

Document numbers

Every document gets a permanent, sequential number from the database the moment it is saved.

The format

Numbers look like `PREFIX-YEAR-00001` . The counter is per document type and restarts at 00001 every January (Cairo time).

Prefix	Document
QT	Quotation
SO	Sales order
INV	Invoice
RCT	Receipt (payment)
PR	Purchase request
PO	Purchase order
GRN	Goods received note
MO	Production (manufacturing) order
QC	Quality inspection
DN	Delivery note
INS	Installation
POS	Point-of-sale sale
DB	Design brief
SV	Site visit

The rules

- The number is issued by the database when you save, never typed by hand.
- Two people saving at the same second still get different numbers.
- A number can't be changed once issued.
- The same number can't exist twice in your workspace.
- Issued quotations, sales orders, purchase requests and purchase orders can't be deleted — only cancelled. Invoices and receipts can only be voided.

 **Good to know:** A **gap** in the sequence is normal: if a save fails after the number was issued (for example the connection dropped), that number is not reused.

How documents reference each other

Follow any document back to where it came from and forward to what it produced.

The reference chain

Document	Points back to	Points forward to
Quotation	—	The sales order it became
Sales order	Source quotation	Its invoices; production orders linked to it
Invoice	Sales order and quotation	Every receipt paid against it
Receipt	Invoice (and its sales order)	—
Purchase request	—	The purchase order it became
Purchase order	Source purchase request	Every goods received note
Goods received note	Purchase order	—
Production order	Sales order, design brief	Deliveries, QC inspections
Delivery note	Production order and sales order	Installation

These references are printed on the documents too, so a customer, supplier or accountant can trace them without logging in.

A sales order shows its quotation and every invoice

Printing and saving as PDF

Every document prints on A4 in English and Arabic, with your company header.

Print a document

- 1 Choose **Print** (or the printer icon) on the document.
- 2 A new tab opens with the A4 page.
- 3 Choose **Print / Save PDF**. In the browser's dialog pick a printer, or **Save as PDF** to email it.
- 4 Choose **Close** to close the tab.

Document	Where the Print button is
Quotation	On the quotation card
Sales order	On the order row
Invoice / receipt	Finance → Invoices (and right after issuing)
Purchase request / order	Purchasing → Requests / Orders
Goods received note	After receiving, or the GRN number on the PO row
Production order	Planning & Cutting → open the order
Delivery note	Delivery → open the delivery
POS sale	After payment on the till

Best print settings

- Paper: **A4**. Margins: **Default**. Scale: **100%**.

The print view

- Turn **off** "Headers and footers" so the browser doesn't add the web address and date.
- Turn **on** "Background graphics" so PAID / VOID stamps and table lines print.

💡 **Tip:** If nothing opens when you click Print, your browser blocked the new tab. Allow pop-ups for bumblebee-cubs.vercel.app.

Your company details on paper

The header of every printed document uses **Settings** → **Company**: legal name in English and Arabic, address, phone, email, tax registration number and commercial register number. Only owners and admins can edit these.

The screenshot shows the 'Settings' page in the Bumblebee workspace. The left sidebar contains a navigation menu with options: Studio, Branches, Tools, Data, Settings (highlighted), Sales, Production, Inventory, Delivery, Finance, People, Loyalty, Channels, and Insights. The main content area is titled 'Settings' and includes a sub-header 'Manage your profile and preferences'. Below this, there are tabs for Profile, Preferences, Security, Company (selected), Modules, and Notifications. The 'Company' tab displays 'Company details on documents', which are shown in the header of every printed invoice, receipt, and order. The form includes fields for Legal name (English), Legal name (Arabic), Phone, Email, Tax registration no., Commercial register no., and Address. A 'Save' button is located at the bottom of the form. Below the form, there is a section for workspace information: ID: demo-workspace-id, Slug: cubs, Plan: pro, and Role: owner. A yellow circular button with a printer icon is located in the bottom right corner of the settings area.

Settings → Company

Users and access

Create a login for each colleague, choose exactly which modules they can open, and suspend or remove logins.

Users & Access

Lists every member with role, department, status (**Active** or **Suspended**), last sign-in and how many modules they can open. A **Custom** tag means you picked their modules yourself instead of using the role's. Tabs: **Overview**, **Members** and **Roles**.

People → Users & Access

Create a login

- 1 Choose **Create login**.
- 2 Enter the **Full name**.
- 3 Enter a **Username**: 3–32 characters, lowercase letters, numbers, dot, dash or underscore, starting with a letter or number (for example `sara.ahmed`).
- 4 Type a **Password** of at least 8 characters, or choose **Generate** for a strong one.
- 5 Pick one or more **Roles** — ready-made jobs grouped by department (see **Roles**) — and the department. Someone who does two jobs gets both roles; their modules are combined. The first role is their main one. The box below lists the modules they'll open.
- 6 To choose the modules yourself, choose **Pick modules myself** and set each module to **Off**, **View**, **Edit** or **Full** (see below).
- 7 Choose **Create login**, then **Copy login details** and send them privately.

 **Important:** The password is shown **once**. If it's lost, reset it — nobody can read it later, not even the owner.

Choose exactly what someone can open

- 1 Click the member to open their panel.
- 2 Under **What they can open**, choose **Pick modules myself**.
- 3 For each module choose **Off**, **View**, **Edit** or **Full**. **All off** clears the list.
- 4 Choose **Save access**. It takes effect on their screen within seconds — no need for them to sign out.

Level	In the sidebar	What they can do
Off	Not shown	Nothing. A pasted link says the page isn't part of their access, and the database returns none of that module's data.

Create a login for a colleague

Level	In the sidebar	What they can do
View	Shown	Open, read, print and export. Saving anything is refused.
Edit	Shown	Also add new records and correct existing ones. No deleting, approving or releasing.
Full	Shown	Everything the module allows, including delete, approve and release.

Custom access **replaces** the role completely — only the modules you set to View, Edit or Full open, nothing is added from the role. Choose **Use the role's modules** to go back to the role's list.

 **Good to know:** Everyone keeps the home dashboard, Today, the activity feed and their own Settings (profile and password). Home numbers only count data from modules they can open. Owners and admins always open everything.

Suspend a login

- 1 Open the member's panel and choose **Suspend & sign out**.
- 2 Within a few seconds they're signed out on every device — computer, phone, any open tab — and land on the sign-in page with a note that an admin suspended their login.
- 3 They can't sign in again while suspended, and the database returns no workspace data to that login.
- 4 To bring them back, choose **Re-activate**. They sign in with the same username and password.

Nothing they created is deleted or changed.

Remove a login for good

- 1 Open the member's panel and choose **Remove login**.
 - 2 Confirm with **Yes, remove**
- They're taken out of the workspace and signed out of every device.
 - The login can never be used again, and their username becomes free for a new login.
 - Everything they created — orders, invoices, stock movements — stays, still showing who made it.

- This can't be undone. To give them access again later, create a new login.

💡 **Tip:** Not sure yet? **Suspend** instead — it's reversible.

Who can manage whom

Who can...	Owner	Admin	Others
Create normal logins	✓	✓	—
Create owner or admin logins	✓	—	—
Change access, suspend, reset password or remove a normal member	✓	✓	—
Do the same to an admin	✓	—	—
Change or remove the owner	—	—	—
Change their own access or remove themselves	—	—	—

Roles and what each can open

31 ready-made roles, one per job. Each opens only the modules listed here.

How roles work

- 1 When you create a login, pick the role that matches the job. The list is grouped by department.
- 2 The person sees only that role's modules, at the level shown below. Everything else is hidden, and the database doesn't return its data.
- 3 Need a different mix for one person? Open their panel and choose **Pick modules myself** — see [Users and access](#).
- 4 People → Users & Access → **Roles** shows every role with its modules, how many people use it, and **Create a login with this role**.

Level	Means
Full	Everything in the module, including delete, approve and release.
Edit	Add new records and correct existing ones. No deleting or approving.
View	Open, read, print and export only.

 **Good to know:** A few roles are narrower than Edit. The **Cashier** can add sales but not change them; the **Storekeeper** can add and correct stock but can't delete or approve; the **Driver** can only update their deliveries. Issuing invoices and recording payments needs Finance **Edit**; voiding them needs Finance approval (**Finance Manager**, **General Manager**, owner, admin).

Every role

Leadership

Role	For	Full	Edit	View
Owner	Full access to everything	Every module	—	—
Admin	Full access, creates logins; can't manage the owner	Every module	—	—

Which role for whom

Person	Role
Factory or business manager who needs to see everything and approve	General Manager
Accountant from outside who reviews the books	Viewer / Auditor
Person who types stock in and out at the warehouse	Storekeeper (data entry)
Person at the gate who checks deliveries against purchase orders	Receiving Clerk

Person	Role
One person who runs production and buys the fabric and trims for it	Production & Purchasing Lead
Shop staff at the till	Cashier
Branch manager	Store Manager
Whoever handles the website orders	E-commerce Manager
Temporary helper entering customers, products and stock	Data Entry Clerk

Team and employees

Your people directory, attendance and leave requests.

Team

Team shows each member's job title, department, type (employee, contractor, intern), status and workload — open tasks, overdue items and work done this week. **Add Employee** adds someone to the directory.

Good to know: Adding someone to Team does **not** give them a login. Logins are created in [Users & Access](#).

People → Team

Employees, attendance and leave

- **Employees** — employee number, English and Arabic name and title, department, contract type, hire date, salary, skills, emergency contact.
- **Attendance** — Present, Absent, Late, Half Day, Excused or Holiday per day, with check-out.
- **Leave Requests** — Annual, Sick, Unpaid, Maternity, Emergency or Other, with dates and reason. Managers **Approve** or **Reject**.

People → Employees

Settings

Your profile and password, workspace preferences, company details, modules and notifications.

The settings tabs

Tab	What you can do	Who
Profile	Your name, phone, job title, department, bio, time zone, date and time format.	Everyone (for themselves)
Preferences	Workspace currency and language setting.	Owner / admin
Security	Change your password (you must enter the current one).	Everyone
Company	Legal names, address, phone, email, tax number, commercial register — printed on documents.	Owner / admin
Modules	A list of modules to switch on or off. (Preview — the sidebar is decided by each person's role, not by this list.)	Owner / admin
Notifications	Which alerts you want and on which channel. (Preview — these choices aren't saved yet.)	Everyone

Your sign-in email and username can't be changed here. Ask an admin if your username must change.

Settings

Company details

- 1 Open **Settings** → **Company**.
- 2 Fill the legal name (English and Arabic), phone, email, tax registration number, commercial register number and address.
- 3 Choose **Save**. The next document you print carries the new header.

 **Important:** If you see "Couldn't save", your role is not owner or admin.

The screenshot displays the 'Settings' page within the Bumblebee workspace, specifically the 'Company' tab. The page is titled 'Settings' with the subtitle 'Manage your profile and preferences'. Below this, there are tabs for 'Profile', 'Preferences', 'Security', 'Company' (selected), 'Modules', and 'Notifications'. The 'Company details on documents' section is highlighted, showing fields for 'Legal name (English)' (filled with 'CUBS'), 'Legal name (Arabic)', 'Phone', 'Email', 'Tax registration no.', 'Commercial register no.', and 'Address'. A 'Save' button is located below these fields. At the bottom, there is a section for 'ID: demo-workspace-id', 'Slug: cubs', 'Plan: pro', and 'Role: owner'. The left sidebar contains a list of workspace modules: Studio, Branches, Tools, Data, Settings (highlighted), Sales, Production, Inventory, Delivery, Finance, People, Loyalty, Channels, and Insights. The top navigation bar includes a search bar, a user profile icon, and the text 'Demo User'.

Settings → Company

Branches and registers

Your factory, warehouse, shops and showrooms — and the tills in each.

Branches

- 1 Choose **Add Branch**. Enter the name (English and Arabic), code, type (**Retail, Showroom, Warehouse, Factory, Office**), address, phone, manager and status.
- 2 Select the branch and choose **Add Register** for each till: name and opening **float** (cash in the drawer).
- 3 Registers marked active appear on the Point of Sale.

Branches

Reports, analytics, activity and data

Build reports, read the analytics centre, follow activity, and move data in and out with CSV.

Reports

Ready reports for sales, finance, operations, inventory, purchasing and executive views, plus a **Report Builder**: choose the data source, metric, group-by, filters, date range (today, last 7/30/90 days, this year, all time) and chart type (table, bar, donut). **Save** it to reuse; **Export** downloads it.

Insights → Reports

Analytics

The Analytics Command Center reads your real records: sales funnel, top customers and products by revenue, collection rate, cash flow, production efficiency, stock distribution, items needing reorder and purchase orders by status.

Insights → Analytics

Activity and work items

Activity is a feed of what happened — orders created, stages completed, inspections passed — filterable by type, person and date.

Work Items is a general task board (list, kanban or calendar) for tasks, tickets, requests and work orders with assignee, priority and due date.

Home → Activity

Import and export

- **Export** any list (organizations, people, work items, invoices, payments, expenses, resources, activity) as CSV, or **Export All Data**.
- **Import** from a CSV file: download the **template** first, fill it in Excel or Google Sheets, save as CSV (UTF-8), then upload. The importer maps columns and shows how many rows were created or failed.

💡 **Tip:** Keep Arabic text readable in Excel by saving as "CSV UTF-8".

Data management

Preview modules

Preview

What the sample-data modules show today, and why changes there aren't saved.

What a preview module is

These screens are fully designed and clickable, but they read **sample data** built into the app instead of your workspace. Anything you add or edit there disappears when you refresh. Use them to explore and give feedback; don't record real business in them yet.

Module	Shows
CRM, Customers, Deal pipeline	Customer profiles, segments, deals by stage.
Finance dashboard, Expenses, Receivable/Payable, Bank, Finance reports	Cash position, expense tracking, ageing, bank accounts.
HR dashboard, Payroll, Recruitment, Performance, Training, Compliance, Relations, Org structure	The full HR suite.
Loyalty (all pages)	Points, tiers, rewards, campaigns, redemptions.
Shopify kit: Wallet, Wishlist, Reviews	Storefront add-ons.
Mobile apps	App builder, configuration, push notifications, analytics.
Studio	Pages and databases workspace.
Intelligence, Memory, Decisions, Forecast, Risk Radar, Rhythms, Work Queue	Insight and planning views.

Good to know: Live equivalents exist for the essentials: invoices and receipts (Finance → Invoices), employees and leave (People → Employees), and customers inside quotations and sales orders.

CRM (preview)

Finance dashboard

A picture of the planned finance cockpit: revenue, expenses, cash flow and ageing. Real invoices and payments live in **Finance → Invoices**.

Finance → Dashboard (preview)

HR dashboard

Headcount, attendance trends, payroll and hiring at a glance. Real employee records, attendance and leave live in **People → Employees**.

People → HR (preview)

Loyalty

Members, tiers, earning rules and rewards. The Point of Sale already records loyalty points earned per sale.

Loyalty (preview)

Shopify and mobile apps

The Shopify integration screen walks through connecting a store (client ID or access token), choosing what syncs in which direction and how often. Connecting requires the Shopify sync service to be set up for your workspace by the Bumblebee team.

The screenshot shows the 'Channels' section of the Bumblebee dashboard, specifically the 'Shopify Integration' screen. The left sidebar is identical to the previous screenshot. The main content area is titled 'CHANNELS Integrations' and 'Shopify Integration'. It begins with a 'Not Connected' status and a 'Follow the steps below' instruction. A progress bar indicates three steps: '1. Your store', '2. What syncs & which way', and '3. Review & connect'. The 'Your Store Details' section contains the following fields: Store URL (my-store.myshopify.com), Connection Method (Dev Dashboard app (current) selected, Legacy access token (shpat_...)), Client ID, and Secret (shps_...). A note states: 'Bumblebee exchanges these for a temporary access token and auto-renews it every 24h — server-side only'. A link 'Where do I find my Client ID & Secret? (step-by-step guide)' is provided. A 'Next: Choose Data' button is at the bottom right.

Channels → Shopify integration

When something doesn't work

Find the message you see (shown in quotes) or the symptom. Each entry gives the cause and the fix.

Signing in

I can't sign in

"That username and password don't match. Check both and try again."

Why: The username or the password is wrong, or Caps Lock is on.

1. Type the username exactly as your admin sent it (letters, numbers, dot, dash, underscore).
2. Check Caps Lock; use the eye icon to see the password.
3. Still failing? Ask an owner or admin to reset your password in Users & Access.

Nothing works and the page says it can't connect

"Can't reach the server. Check your connection and try again."

Why: No internet, a captive Wi-Fi portal, or a network that blocks the site.

1. Open any other website to check your connection.
2. On office or hotel Wi-Fi, accept the Wi-Fi terms page first.
3. Try mobile data to rule out a blocked network.

Sign-in is refused for a suspended or removed login

"This login is suspended or was removed. Ask your admin."

Why: The login is suspended or was removed.

Fix: Ask an owner or admin to Re-activate it, or to create a new login.

Sign-in is temporarily blocked

"Too many attempts. Wait a minute, then try again."

Why: Several failed attempts in a short time.

1. Wait one minute before trying again.
2. If you've forgotten the password, ask an admin to reset it rather than guessing.

I was signed out and the sign-in page says an admin suspended or removed my login

Why: An owner or admin suspended or removed your login. This signs you out of every device within seconds.

1. Suspended: ask an owner or admin to choose Re-activate on your profile in Users & Access.
2. Removed: the login can't be used again — ask them to create a new one if you still need access.

I signed in but I'm told I don't belong to a workspace

Why: The login exists but isn't a member of the CUBS workspace (for example it was created outside Users & Access).

1. Sign out.
2. Ask an owner or admin to create your login from Users & Access, which adds you to the workspace automatically.

I forgot my password

Why: There is no email reset link in Bumblebee.

1. Ask an owner or admin to choose Reset password on your profile in Users & Access.
2. Sign in with the new password, then change it in Settings → Security.

Access

A page says it isn't part of my access

“This page isn't part of your access”

Why: Your role doesn't include that module.

Fix: Ask an admin to change your role or add that module to your access in Users & Access.

Saving is refused in a module I can open

“Your access to this module doesn't allow this change. Ask an admin for Edit or Full access.”

Why: You have View access to that module, which can read but not add or change.

Fix: Ask an admin to set the module to Edit or Full on your panel in Users & Access.

Create invoice or Record payment isn't there

“Your access doesn't include Finance, so you can't issue invoices or receipts”

Why: Issuing invoices and receipts needs Edit access to Finance.

Fix: Ask an admin to give you Finance access, or ask a finance colleague to issue it.

A module is missing from my sidebar

Why: Your role, or the modules your admin picked for you, don't include it.

Fix: Ask an admin to open your panel in Users & Access and set that module to View, Edit or Full. It appears within seconds.

A colleague can open modules I didn't want them to

Why: They're using their role's module list, which includes those modules — or they're an admin, who opens everything.

1. Open their panel, choose Pick modules myself, set everything they shouldn't open to Off, and Save access.
2. If their role is Admin, change it to a normal role first.

I can't remove or change a login

“The owner can't be removed”

Why: Nobody can remove or change the owner, remove themselves or change their own access, and only the owner manages admins.

Fix: Ask the owner if it's an admin; the owner account itself can't be removed.

Creating a login or saving access fails with a database message

“The database needs the latest access update. Run 4-access-control.sql in the Supabase SQL editor, then try again.”

Why: The app was updated but the matching database update hasn't been run yet (older message: violates check constraint "workspace_members_role_check").

1. Open the Supabase SQL editor, paste the contents of 4-access-control.sql and run it.
2. Try again — nothing needs to be re-entered except the form.

I can't create an admin or owner login

“Only the owner can create another owner or admin”

Why: Admins can create normal logins only.

Fix: Ask the workspace owner to create it.

I can't reset an admin's password

“Only the owner can reset an owner or admin password”

Why: Protection against one admin taking over another.

Fix: Ask the workspace owner to reset it.

Create login is greyed out or refused

“Usernames are 3–32 characters: letters, numbers, dot, dash, underscore”

Why: The username or password doesn't meet the rules, or the name is empty.

1. Use 3–32 lowercase characters: a–z, 0–9, . - _ and start with a letter or number.
2. Use a password of at least 8 characters (or Generate).
3. Fill in the full name.

The username is refused

“That username is taken”

Why: Another login already uses it.

Fix: Add a distinguishing part, for example sara.ahmed2 or sara.sales.

The password is refused

“Password must be at least 8 characters”

Why: Passwords need 8 or more characters.

Fix: Use a longer password, or choose Generate.

Changing my password fails

“Current password is wrong”

Why: Settings → Security checks your current password first.

1. Retype your current password.
2. If you don't know it, ask an admin to reset it.

Using the app

A page shows an error card instead of loading

Why: Usually a new version of Bumblebee was released while your tab was open, or the connection dropped mid-load.

1. Bumblebee reloads itself once automatically when a new version is detected.
2. If the card stays, press Ctrl+Shift+R (⌘⇧R on Mac) to hard-refresh.
3. If it happens on one page every time, tell your admin which page and what you clicked.

I don't see a change a colleague just made

Why: Most lists load when you open the page.

Fix: Open the page again or refresh it (F5).

Buzz answers with an API error

Why: The AI service behind Buzz isn't set up for this workspace.

Fix: Everything else works without Buzz. Ask the Bumblebee team to switch the assistant on if you want it.

The language goes back to English after refreshing

Why: The browser isn't allowing the site to store settings (private/incognito window or strict privacy mode).

1. Use a normal browser window.
2. Allow site data for `bumblebee-cubs.vercel.app` in the browser's privacy settings.

What I entered in CRM / Loyalty / HR dashboard disappeared

Why: Those are preview modules that use sample data and don't save.

Fix: Record real work in the live modules — see the list in Preview modules.

Settings says it couldn't save

Why: Workspace settings (company, currency, modules) can only be changed by an owner or admin.

Fix: Ask an owner or admin to make the change.

Documents

Saving fails with a number error

“Couldn't issue a number”

Why: The numbering service didn't answer — usually the connection dropped, or the database update for document numbers hasn't been installed.

1. Check your connection and save again.
2. If it keeps happening for everyone, the admin must run the documents database update (3-documents.sql) in Supabase.

A number is missing from the sequence

Why: A save failed after the number was issued. Numbers are never reused.

Fix: Nothing to fix — a gap is expected and safe. The skipped number was never used on any document.

I can't delete a document

“... is issued and can't be deleted – cancel it instead”

Why: Numbered documents are kept for the record.

1. Cancel quotations, sales orders and purchase documents.
2. Void invoices and receipts, with a reason.

I want to change a document number

“Document number ... can't be changed once issued”

Why: Numbers are permanent references that may already be printed.

Fix: Cancel the document and create a new one if the number really must differ.

Printing

Clicking Print does nothing

Why: The browser blocked the new tab as a pop-up.

1. Look for the blocked pop-up icon at the right of the address bar and choose Always allow for this site.
2. Click Print again.

The print tab says "Document not found"

Why: The document is in a different workspace, your access doesn't include it, or the link was copied from someone else's session.

1. Open the document from its page in Bumblebee and click Print from there.
2. Ask an admin to check your access to that module.

The printout shows the web address and date in the margins

Why: The browser adds headers and footers.

Fix: In the print dialog open More settings and untick Headers and footers.

PAID / VOID stamps or table lines don't print

Why: Background graphics are turned off in the print dialog.

Fix: In the print dialog open More settings and tick Background graphics.

The printed header shows the wrong company name or no tax number

Why: Company details aren't filled in.

Fix: An owner or admin fills Settings → Company and saves. Print again.

The printed page is cut off or tiny

Why: Paper size or scale is wrong.

Fix: Choose A4 paper, Default margins and 100% scale.

Sales

There's no Convert to Sales Order button

Why: The quotation isn't approved yet, or it was already converted.

1. Choose Send, then Approve, then convert.
2. If it says "Sales order SO-...", it's already converted — open that order.

A quotation won't save

“Add at least one item.”

Why: Quotations need at least one line with a product name.

Fix: Add a line with a product name, quantity and price.

I can't cancel a sales order

Why: The order has invoices that aren't void.

Fix: Void the receipts on those invoices, void the invoices, then cancel the order.

The till shows "No registers"

Why: The selected branch has no active register.

Fix: Open Branches, select the branch and choose Add Register.

A held sale disappeared

Why: Held sales are kept only while the till page stays open.

Fix: Add the items again. Complete held sales before refreshing or closing the tab.

The till says "Check the payment"

Why: The payment details don't add up — most often cash received is less than the total.

Fix: Enter the full cash received, or switch to Split for part cash, part card.

The till says the payment failed

"Payment failed – The sale was not recorded."

Why: The sale couldn't be saved, usually because the connection dropped.

Fix: The cart is kept. Check your connection and choose Confirm Payment again.

Invoices & payments

I can't invoice an order

"Confirm the sales order before invoicing it"

Why: The order is Draft or Cancelled.

1. Choose Confirm on the order row, then Create invoice.
2. A cancelled order can't be invoiced — create a new order.

Create invoice is missing on an order

"This order is already fully invoiced"

Why: The order is fully invoiced, or it's Draft/Cancelled.

Fix: Check the billing line on the order. Record payments on the existing invoices in Finance → Invoices.

The invoice amount is refused

"Only X is left to invoice on this order"

Why: The amount would take total invoicing above the order total.

Fix: Invoice at most the amount shown. If the order total is wrong, correct the order (see Fixing mistakes).

The invoice amount is refused

"Invoice amount must be more than zero"

Why: The amount is empty or 0.

Fix: Type a positive amount.

A payment is refused

“Only X is due on invoice INV-...”

Why: The payment is larger than the balance.

1. Record the balance on this invoice and the rest on the customer's next invoice.
2. If the customer paid in advance for more, invoice more from the sales order first.

I can't record a payment

“Invoice INV-... is void, payments can't be recorded”

Why: Payments can only go on issued, non-void invoices.

Fix: Record the payment on the replacement invoice.

I can't void an invoice

“Void the receipts on INV-... first”

Why: The invoice has payments recorded against it.

Fix: Void each receipt (with a reason), then void the invoice.

Void is refused

“Voiding needs Finance approval access”

Why: Voiding money documents needs approval rights in Finance.

Fix: Ask a Finance Manager, the General Manager, an admin or the owner to void it.

Void won't confirm

“Give a reason for voiding”

Why: A reason is required and printed on the document.

Fix: Type a short reason, for example "Wrong amount — replaced by INV-2026-00031".

VAT or totals differ by 0.01

Why: Amounts are rounded to 2 decimals at each step.

Fix: This is normal rounding. The invoice total is always exactly the amount you issued.

Purchasing & stock

There's no Create PO button on a request

Why: The request isn't approved, or it was already turned into a PO (status Ordered).

Fix: Submit it and have a manager approve it.

There's no Receive button on a purchase order

Why: The PO is still Draft, already fully received, cancelled, or it's an older PO without item lines.

1. Choose Send to supplier first.
2. For an old PO without lines, create a new PO with lines for what's still expected.

Confirm receipt is disabled and a box is red

"You can't receive more than was ordered."

Why: The quantity in Now is more than what's still outstanding on that line.

Fix: Enter only what's outstanding. Raise a new PO for any extra the supplier sent.

A purchase order won't save

"Choose the supplier."

Why: POs need a supplier, a description and at least one line with a quantity.

Fix: Add the supplier with Add Vendor if they're new, then pick them.

I can't cancel a purchase order

"Goods were already received on this order, so it can't be cancelled."

Why: The PO has at least one goods received note.

Fix: Leave it as is and note the difference; create a new PO if more is needed.

An item shows Low Stock but we have enough

Why: The reorder level is set too high, or the on-hand quantity wasn't updated.

1. Edit the item's reorder level.
2. Record a Stock In or Adjustment to correct the count.

Production

A production order won't save

"Enter the quantity to produce"

Why: New production orders need a title and a quantity.

Fix: Fill Title and Quantity (pieces).

I can't move a stage from the Production page

Why: Stages are moved from the order itself.

Fix: Open Production → Planning & Cutting, open the order, and use Start / Done on the stage.

My design brief isn't in the production order list

Why: Only approved design briefs are offered.

Fix: Move the brief to Approved in Designs.

Frequently asked questions

General

What is Bumblebee?

The system CUBS uses to run the business: sales, production, stock, purchasing, invoicing and the team, in English and Arabic. See [What Bumblebee is](#).

Do I need to install anything?

No. It runs in any modern browser — Chrome, Edge, Safari or Firefox — on a computer, tablet or phone.

Does it work on my phone?

Yes. The layout adapts to phone screens. For long forms like sales orders and product costing, a laptop or tablet is more comfortable.

Does it work offline?

No. Bumblebee needs an internet connection to load and save data. If the connection drops, saving fails with a clear message and nothing half-saved is kept.

Which modules save real data?

Sales, production, stock, purchasing, invoices, users, team, employees, settings, reports and data. A few modules are previews with sample data — see [Preview modules](#).

What currency does it use?

Egyptian pounds (EGP) by default. The workspace currency can be changed in Settings → Preferences by an owner or admin.

What VAT rate is used?

14% (Egyptian VAT) by default on purchase orders and the Point of Sale. On quotations you enter the VAT rate per document, so 0% is possible for exempt sales.

Is there a user manual I can share?

Yes — this help centre, and the PDF version downloadable from the top of the [docs home](#).

Accounts & access

How do I get a login?

An owner or admin creates it in Users & Access and sends you the username and password. There's no public sign-up.

Can I sign in with Google?

No. Bumblebee uses usernames and passwords created by your admin only.

How do I change my password?

Settings → Security → enter your current password and the new one (8+ characters) → Change password.

I forgot my password. What now?

Ask an owner or admin to reset it from Users & Access. Only the owner can reset an owner's or admin's password.

Can I change my username?

Not by yourself. Ask an admin; if needed they create a new login and suspend the old one.

Can two people share one login?

Don't. Each person should have their own login so the activity feed and documents show who did what, and access can be removed for one person without affecting others.

Someone left the company. How do I remove their access?

Users & Access → select them → **Remove login** → confirm. They're signed out of every device and the login can never be used again; everything they created stays. If you might bring them back, choose **Suspend & sign out** instead.

What's the difference between suspend and remove?

Suspend signs them out everywhere and blocks sign-in until you choose Re-activate — reversible. Remove closes the login for good and frees the username. Neither deletes anything they created.

How do I give someone only one or two modules?

Open their panel in Users & Access → **Pick modules myself** → set those modules to View or Work and everything else to Off → **Save access**. Only those modules appear for them. See [Users and access](#).

Does a suspended person get signed out straight away?

Yes. Within a few seconds on every device and tab, and they can't sign back in until re-activated.

Which ready-made roles are there?

Over 30, grouped by department: General Manager, Viewer/Auditor, Sales Manager, Sales Executive, Store Manager, Cashier, E-commerce Manager, Customer Service, Production Manager, Production & Purchasing Lead, Production Planner, Line Supervisor, Pattern & Cutting Master, Designer, Quality Manager, QC Inspector, Warehouse Manager, Storekeeper (data entry), Receiving Clerk, Purchasing Manager, Buyer, Import Coordinator, Dispatcher, Driver, Finance Manager, Accountant, HR Manager, HR Officer and Data Entry Clerk — plus Owner and Admin. See [Roles](#).

Can one person have more than one role?

Yes. In **Roles** on the create form or their panel, choose **Add role** and tick as many as they need — for example Storekeeper and Cashier. They get every module from all their roles, at the highest level any of them gives. The first role is shown as their main one.

Can I change what a ready-made role opens for just one person?

Yes. Pick the closest role, then open their panel → **Pick modules myself** and adjust. The role itself stays the same for everyone else.

What can each role do?

See [Roles](#) for the full table: Owner, Admin, Sales, Finance, Production Manager, Warehouse, Purchasing, Quality Control, Delivery and Viewer.

How long do I stay signed in?

Until you sign out or clear the browser's site data. Always sign out on shared computers.

Can I be signed in on my laptop and phone at the same time?

Yes.

Numbers & documents

How are document numbers created?

The database issues them when you save: PREFIX-YEAR-00001, one counter per document type, restarting every January. See [Document numbers](#).

Can I type my own quotation or invoice number?

No. Hand-typed numbers lead to duplicates and gaps. The number is issued on save and can't be edited.

Why is there a gap in the numbers?

A save failed after its number was issued. Numbers are never reused, so a gap is expected and harmless.

Can I delete an invoice or order I created by mistake?

No. Cancel quotations, orders and purchase documents; void invoices and receipts with a reason. See [Fixing mistakes](#).

Can I edit a sales order after invoicing it?

Status and details can be updated, but invoices already issued don't change. If the amount is wrong, void the invoice(s) and invoice again.

How do I find which quotation an invoice came from?

It's printed on the invoice and on the sales order. See [References](#).

Do the numbers restart every year?

Yes, each type starts again at 00001 on 1 January, Cairo time. The year in the number keeps them unique.

Invoices & payments

Can I take a deposit?

Yes. On the sales order choose Create invoice → Part / deposit and type the amount. Invoice the rest later — Bumblebee tracks what's left.

Can a customer pay one invoice in instalments?

Yes. Record each payment separately; each gets its own receipt and the invoice moves from Partially paid to Paid.

What payment methods can I record?

Cash, InstaPay, bank transfer, card, mobile wallet and cheque, each with an optional reference number.

A customer overpaid. How do I record it?

Record only the balance on the invoice. Invoice the next part of their order (or a new order) and record the rest there.

I recorded a payment on the wrong invoice.

Void that receipt with a reason, then record the payment on the correct invoice.

When is an invoice overdue?

When its due date has passed and a balance remains. Overdue invoices show in red and on the dashboard.

Who can void invoices and receipts?

Anyone with approval rights in Finance: the Finance Manager and General Manager roles, admins and the owner. Accountants can issue but not void.

Is the invoice a valid e-invoice for the Egyptian Tax Authority?

No. Bumblebee prints a tax invoice with your tax number, but it doesn't submit to the ETA e-invoicing portal.

How is VAT split on a deposit?

The amount includes VAT: before VAT = amount ÷ 1.14, VAT = the difference. A 1,000 EGP deposit is 877.19 + 122.81.

Purchasing & stock

Do I need a purchase request before a purchase order?

No. Requests are for getting approval. You can create a PO directly with New PO.

The supplier delivered in two shipments.

Receive twice. Each delivery gets its own GRN and the PO stays Partially Received until everything arrives.

The supplier sent more than we ordered.

You can't receive more than ordered. Raise a new PO for the extra quantity and receive it there.

How do I track imported fabric?

Create the PO with the overseas supplier, payment terms (for example 30% advance) and lines in metres; receive against it when it clears customs. Keep the supplier's delivery or B/L number in the GRN's supplier reference.

How do I correct a stock count?

Inventory → New Movement → Adjustment, with the reason. Or use Quick adjust on the item.

What does Low Stock mean?

The on-hand quantity is at or below the item's reorder level.

Production

What are the production stages?

Pattern & Marker, Cutting, Sewing, Finishing & Pressing, Quality Check, Packing — created automatically for every production order.

Can I skip a stage?

Mark it Done straight away with a note. Progress is based on stages completed.

How do I record the size ratio for cutting?

In the order's Cutting List, each piece has a size ratio field, for example 2Y:1 4Y:2 6Y:2 8Y:2.

How do I know what's late?

Overdue orders are flagged on Planning & Cutting, in Production → Alerts, and on the Overview.

What happens when QC fails?

Log the defects, send them to rework, and run a Re-Inspection. The production order stays open until it passes.

Printing

Can I save a document as PDF?

Yes. Print → Print / Save PDF → choose Save as PDF as the printer.

Why are documents in both English and Arabic?

So one printout works for every customer, supplier and authority. It doesn't depend on the language you use in the app.

How do I put our logo and tax number on documents?

The CUBS logo is built in. Tax number, commercial register, address and legal names come from Settings → Company.

Can a customer see a document without logging in?

No. Print or save it as PDF and send them the file.

Data & security

Where is our data stored?

In a dedicated, encrypted database project for CUBS on Supabase. Every table is protected so only members of the CUBS workspace can read it.

Can I export everything?

Yes. Data → Export All Data, or Export on any list, downloads CSV files you can open in Excel.

Can I import from Excel?

Yes. Download the CSV template in Data, fill it, save as CSV UTF-8 and import.

Who can see salaries?

Only people with the **HR & Employees** module (and owners and admins). The database doesn't return employee records to anyone else.

Is access only hidden in the menu, or really blocked?

Really blocked. The same module list is checked by the database, so a pasted link, a report or a direct request can't return data from a module someone doesn't have.

Is there an audit trail?

The Activity feed shows what was created and changed, and every document keeps who issued it, when, and void or cancel reasons.

Language

How do I switch to Arabic?

Click AR in the top bar. Click EN to switch back.

Why does it switch back to English?

Your browser is blocking site storage (usually a private window). Use a normal window.

Can a record have both English and Arabic names?

Products, employees, branches and several other records have separate English and Arabic fields.
